Granita™

Mineral Stone Technology

Granita™ Technology recreates the beauty of natural stone through a highly durable, low-maintenance mineral finish.
Its deep, distinctive colors create a sophisticated visual experience that goes beyond the traditional finish of concrete pools, transforming the pool into an architectural centerpiece.

International ICC Certification

Engineered for Extreme Conditions

From North America to the Middle East and Latin America, Fiber pools perform across a wide range of climates and geological conditions.

Engineered to withstand intense cold, extreme heat and challenging soil conditions, they maintain structural stability and reliable performance in real world installations.

Proven Strength. Certified Engineering.

International ICC certification validates the performance of Fiber pools through rigorous testing for strength, impact resistance, flexibility and durability.

ICC INTERNATIONAL CODE COUNCIL®

About Fiber

A Global Company. Built to Grow.

With more than 25 years of experience and over 100,000 pools installed, Fiber combines manufacturing capacity, industry know-how and an international presence to serve markets around the world.

Manufacturing facilities, distribution centers, training operations and an international network provide the infrastructure to bring Fiber technology to customers across multiple regions.
